

strategy „Energiehafen Rostock“

Forming an RES-Valley with industrial production and import in one decade

Challenge	Transformation of the Rostock seaport from a fossil fuels transshipment point to a production site and transshipment point of climate-neutral energy sources
Solution	Active Role within Europeans IPCEI Hydrogen Approach Partnering Germany's H2-Global foundation as a harbour project partner (green ammonia)
Usage	Holistic Approach to perform a hub with green industrial up-, mid-, downstream Baltic link to the European Hydrogen Backbone
